

## Clear Horizon partnering with Cardno to deliver the PNG Economic and Social Infrastructure Program

Well designed, built and maintained economic and social infrastructure underpins economic and human development objectives.

Clear Horizon is partnering with Cardno on the Australian-funded PNG Economic and Social Infrastructure Program (ESIP), providing bespoke Monitoring, Evaluation and Learning quality assurance and support services.

ESIP is a new, strategic development assistance program supported by the Australian Government and managed by Cardno. The Program will support PNG to address the challenges to improving the planning, prioritisation, delivery and sustainability of infrastructure in PNG. ESIP will work across key economic and social infrastructure sectors at the project, sectoral and national levels

ESIP is in its inception phase, and Clear Horizon has been working with the Program's monitoring, evaluation and social safeguards team to develop sector program logics including an overarching program logic, and scoping the Monitoring, Evaluation and Learning (MEL) Framework (MELF). Clear Horizon facilitated a number of problem analysis workshops to make clear the problem and causes at sector level, which helped clarify where the Program could support changes, and what issues were outside the Program's scope. This provided the foundation to developing sector-level program logics.

Clear Horizon will bring its experience from working across different governance and facility investments in developing ESIP's MELF. This includes developing:

- Tools to track investment decision-making criteria and rubric, to assess proposed and selected activities' contribution to achieving outcomes,
- Rubrics to assess capacity building at different levels, including individual (e.g. using Kirkpatrick model) and organisational (e.g. organizational policies and processes to support skills to practice)
- Significant instances of policy and systems influence (SIPSI) at the sector and national level

ESIP has a commitment to continual learning and improvement. The MELF will include regular reflection processes to ensure that monitoring data is collected and analysed, and activities can be adjusted, stopped or scaled up as required.

Clear Horizon is excited to be partnering with Cardno in delivering the ESIP and supporting the PNG's development objectives.
